How to Use the EM chip

Loading the EM chip

- 1 Position the card at the card slot entrance, making sure it is facing the same way as shown in the diagram below, with the notched corner at the bottom right. Then slide in as shown.

- 2 Fit the battery into the battery slot on back of the phone. Press the battery down until it clicks into place.

- 3 Slide the back cover to the phone.

Unloading the EM chip

Only unload the EM chip and the battery after powering off your phone. Otherwise, your phone may be damaged.

To unload the EM chip, do as follows:

- 1 Unload the back cover out of the phone.

Charging the Battery

- 2 Take out the battery.

- 3 Press the EM chip with one finger and slide it out of the slot.

Charging the Battery

Before Charging the Battery

Before charging the battery, read the precautions carefully.

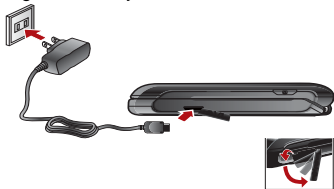

Note

- When you charge the battery for the first time, please charge it for a minimum of 12 hours.
- The battery discharges even while not being used. If you haven't used it for a long time, please recharge it first.
- The charging time depends on the environmental temperature and the age of the battery.
- The battery can be recharged but eventually wears out. If the battery lasts for a shorter time period than usual after being charged normally, replace it with a battery of the same type.
- Do not strike, toss or cause any kind of violent shock to the battery, otherwise liquid leakage, body damage, overheating, explosion or fire may occur.
- Charge the battery by using the charger supplied with your phone.

Charging with a Cable Charger

Before charging the battery with a cable charger, ensure that the battery has been properly loaded into your phone.

To charge the battery, do as follows:

- 1 Insert the plug of the charger into the connector of the phone as shown in the preceding figure. Before inserting the plug, ensure that the arrow on the charger output jack points to the front side of the phone.
- 2 Plug in the connector of the charger to a power socket.
- 3 When the battery is being charged, the charging indicator blinks continuously. When the charging indicator stops blinking, it indicates that the battery is full.

- 4 After being charged, unplug the power adapter from the power socket, unplug the charger from the mobile phone, and then close the protection cover.

Note

- During charging with power is off and the flip closed, a cylinder icon indicating the power level of the battery will appear on the screen and will blink, continuously. When the cylinder is filled and stops blinking, it indicates that the charging is completed.
- When charging the mobile phone with it closed and is powered on, the battery icon is blinking on the upper right corner of the external display. After a while, the external display is automatically off. You can check the charging status by softly touching a side key. When the battery icon stops blinking, the charging is complete.
